BASEBOARD

Baseboards are placed along the wall at the floor. They should be chosen to work in harmony with your casing to finish and tie the room together. Baseboards are usually thinner than the casing.

BACKBAND

CASING

Casings define the overall character of a room and are often the most visible part of the trim. They are used primarily to cover the gap between drywall and the door or window frame. Casings are generally thicker than the base mouldings.

CHAIR RAIL

Chair Rails are practical as well as decorative. Applied to a wall, anywhere from 24 to 48 inches from the floor, they protect the wall from scuffs and dents from the backs of chairs as well as adding a distinctive accent to any room.

Stellar Hardwood is a full service trim supplier, stocking over 100 different moulding profiles.

We also offer a full line of:

MISC.

Quarter Rounds come in several sizes and serve a variety of functions. They are most often used with baseboards.

Base Shoes are primarily used to trim flooring materials and are often used in combination with a traditional baseboard to conceal variations between the flooring and the base. This versatile profile works great to solve numerous trimming needs.

Door Stop mouldings are attached to the door jamb on both sides and at the top. It is where the door comes to a rest when it is closed stopping the door from moving any further, and covering the gap that would otherwise appear between the door and the jambs.
